

Residents Distrust In The Arrogant And Ignorant Behaviour Of The SMRC Is Continuing To Escalate.

The irresponsible SMRC statement implying that the symptoms that 1000's of innocent residents are experiencing when exposed to the RRRC Waste Composting Facility odour, including blood noses, relentless skin and allergy reactions, severe chest pain and breathing problems, dizzy spells and migraines, is "all in residents head" is typical of this disdainful regional council. One of Australia's leading toxicologist and internationally renowned GCM, who work with Erin Brockovich, have both stated the horrendous risks associated with the chemicals found in the RRRC Waste Composting Facility odour.

The Standing Committee On Environment And Public Affairs Municipal Waste Management In Western Australia found that the community's concerns regarding odour issues at the Regional Resource Recovery Centre in Canning Vale were legitimate. And that the Southern Metropolitan Regional Council had a poor communication strategy with respect to its Regional Resource Recovery Centre and the ongoing concerns of the local community.

Residents dis-trust in the arrogant and ignorant behaviour of the SMRC is continuing to escalate.

The SMRC have admitted on many occasions to the RRRC Waste Composting Facility odour, including spending millions of dollars on residents rates to fix it, now because the SMRC are at a loss as to how to fix the RRRC Waste Composting Facility odour issue, they backpedal and contradict themselves conveniently blaming the RRRC Waste Composting Facility noxious emissions on the Green Waste section of their facility. Residents still copped the RRRC Waste Composting Facility odour in full force even during the SMRC's farce of an experiment of shutting down the Green Waste.

This is hardly the way to kick-off the SMRC "communications" plan – which residents will no doubt be funding via their rates. The SMRC continue to treat residents like they are slow on the uptake with their ongoing pusillanimous propaganda campaigns. However they can't defeat the facts or the truth. The RRRC Waste Composting Facility is a failure AND is emitting a noxious odour that is affecting residents lives and health.
